INTERNSHIPS & PROJECTS

ACT Fibernet(Data engineering - Analytics intern) | [April 2025 – April 2026]

Designed and optimized PySpark-based ETL pipelines for large-scale data processing and migration across SQL, Hive, HBase, and Oracle systems. Developed complex SQL queries to support efficient data transformation, validation, and high-integrity data migration workflows.

1. [Loan Approval](#)

2026

Built a machine learning-based loan approval prediction system that analyzes applicant financial and demographic data to classify loan eligibility.

Implemented and optimized multiple ML models (including XGBoost) with data preprocessing, imbalance handling, and Streamlit deployment for real-time predictions.

2. [Titanic Prediction](#)

2026

Developed a machine learning classification model to predict Titanic passenger survival by performing data preprocessing, feature engineering, and model evaluation.

Compared multiple algorithms and achieved strong performance using Random Forest with accuracy analysis through confusion matrix and ROC-AUC metrics.
