TECHNICAL SKILLS

Full Stack: Intermediate to advanced

Python,SQL: Intermediate to Advanced

Javascript, java,C++: Basics

Data Analytics : Intermediate[[certificate](#)]

Data Science: Intermediate

PySpark: Intermediate to Advanced (Data processing, transformation, and pipeline development)
[[Certificate](#)]

PERSONAL STATEMENT

Versatile and adaptable engineering professional with internship experience in both Data Engineering and Analytics, working on large-scale data systems and business-driven insights. Experienced in building and optimizing ETL pipelines using PySpark, SQL, and Python, with a strong foundation in data processing, analytics, and performance optimization. Passionate about leveraging data to solve real-world problems while also exploring scalable application and web development. Open to diverse technology roles and eager to contribute across various domains in fast-paced, collaborative environments.

EXPERIENCE

ACT Fibernet | Data Engineering (Analytics Intern)

April 2025 – April 2026

- Designed and optimized PySpark-based ETL pipelines to process large-scale batch data across SQL, Hive, HBase, and Oracle systems, improving processing efficiency.
- Executed large-scale data migration workflows, ensuring high data integrity and consistency across distributed systems handling high-volume datasets.
- Developed and optimized complex SQL queries for data extraction, transformation, and validation, enhancing pipeline performance and reliability.

PROJECTS

1. Big Data NLP Pipeline: Amazon Review Sentiment Analysis | [Link](#)

2026

- Built a distributed PySpark pipeline to process and clean **10k+ Amazon reviews**, optimizing transformations using partitioning and caching to reduce runtime by **~20%**.
- Implemented **BERT-based sentiment analysis** to classify reviews with high accuracy, enabling reliable positive/negative insights at scale.
- Designed an end-to-end workflow covering **data ingestion, preprocessing, model inference, and output generation** for downstream analytics.

2. Anubhava AI | [link](#)

2026

- Developed Anubhava, an AI-powered personalized learning platform using MERN Stack, GraphQL, Gemini AI, and Pinecone to create adaptive learning roadmaps based on learner assessments.

- Built a RAG-based AI tutor that delivers accurate, context-aware explanations using verified educational content, minimizing AI hallucinations and improving learning reliability.
- Implemented dynamic performance tracking and adaptive learning flows, enabling real-time quiz analysis, personalized remedial recommendations, and automated progress updates.

EDUCATION ENROLLMENT

Kalvium's UG program in CS (Software Product Engineering)

2023-27

Campus: KARE Srivilliputhur | B.Tech, KARE

ACHIEVEMENTS & EXTRACURRICULARS

Front-End Developer — OSS Club

- Contributed as a Front-End Developer in Team TechBoo, advancing to Level 4 of the Smart India Hackathon through iterative product development and feature delivery.
- Played a key role in securing 1st place at Level 2, collaborating in a fast-paced environment to design and deliver a functional solution under tight deadlines.

Core Team Member — Google Developer Group (GDG)

- Actively contributed to cloud-focused learning initiatives and technical projects, collaborating with peers to build and explore scalable solutions.
- Gained hands-on experience with AWS deployment practices and modern cloud technologies, strengthening understanding of cloud-based application development.
